

# High-Tech from the North of Italy

Teleco has been known for providing innovative solutions for the motorhome and caravan industry for over 40 years

Words Jorg Langfeld

The North of Italy has always been considered the country's automotive technology-forger. Ferrari, the Imola race track, Ducati, Teleco and Telair are important drivers of the region here. Teleco is one of the most important manufacturers of satellite systems in the travel industry and is the market leader in Europe. But Teleco is not only one of the technology leaders in satellite equipment. New products are continuously created in its own development laboratories that make travelling more comfortable. This is where the following is created under the name Telair: Air conditioners, power generators and photovoltaic systems. Satellite systems, TV sets, navigation devices, camera systems, apps and multimedia systems are designed and produced under the name of Teleco. In close cooperation with the University of Bologna, innovations arise here which are sold all over the world. German producers and distributors appreciate Teleco's large service network,

supporting customers travelling throughout Europe, in addition to the high quality. Teleco has been one of the most experienced companies in the sector for over 40 years.

## Television becomes holiday fun!

These things should be considered when buying a satellite system. Anyone travelling with their motorhome will want to have the same image quality as at home when watching TV. In order to make the right decision when purchasing, there are a few things to consider. Parabolic antennas still offer the best reception. They have the furthest range and are therefore particularly suitable for frequent travellers of long distances. Parabolic antennas are the only system to offer the 'all-round carefree package' as they can automatically search a lot more than satellites. The device can turn the reception head (LNB) with a so-called auto-skew function, to compensate for the loss of signal strength due to the earth's curvature. A receiver is no longer necessary for some devices because manufacturers such as Teleco have already integrated it into the TV.

## ALL-ROUNDER

The European leader in satellite systems for the travel industry, Teleco, is presenting a true all-rounder with the Flat-Sat-Elegance-Smart. With this system a single remote control is enough to operate both the antenna and the TV set. This simplifies operation enormously. The receiver does not need to be installed separately, as the television already has an integrated receiver. The system fully automatically orientates itself to the desired satellite with the integrated smart function. The system is particularly well equipped for the future, as it can already transmit both DVB-S and DVB-S2 signals. An increased number of channels is available with the Flat-Sat-Elegance-Smart - but it remains easy to use. The system can be installed particularly quickly. Despite the many additional functions, the system requires no additional cables.

## THE RIGHT CHOICE FOR EVERYONE

### EASY TO USE

With the Teleco design operation panel you always have access to 10 satellites.

### COMPATIBILITY

You do not need any additional devices with Teleco. The components are coordinated with each other and therefore work flawlessly.

### SURFING THE INTERNET

With the Teleco Internet-SAT you can select the provider yourself.

## TERRESTRIAL AND SAT IN ONE DEVICE

The Teleco TY2 TV is optimally oriented to the travel market. No matter how big your motorhome or caravan is, Teleco offers the right TV size. From 19 to 32 inches, everything is possible here. The Teleco Series TY2 devices are designed so that both terrestrial and satellite television programs are received with a single television device without an external decoder. A major advantage of the Teleco device is the separate DVB-S2 card through which you are able to save the channels from up to 5 satellites. This way you can switch between channels much faster. There is also even an optional simplified remote control for the device.

Telego remote control for easy use

## MULTIFUNCTIONAL

No corners were cut when equipping the Teleco TY2 TV set. You can clearly see that great importance was placed here on high quality and extensive features. 1. The device features a dual HD card. One for DVB-satellite-S2 and one for DVB-T MPEG 4 Terrestrial. 2. Double CI+-Ports for CAM HD and SD modules. 3. Double USB port for recording and playback. 4. 4000 SD and HD TV radio channels. 5. Anti-glare screens. 6. Large viewing angle. 7. All models feature an IR multifunction sensor, with which the user is able to control both the TV set, as well as the automatic satellite antennas FlatSat Elegance S and FlatSat Komfort S with only one controller. 8. Time-shift function with all models. This enables you to temporarily pause the program you are watching and resume watching later.
